SMART INDIA HACKATHON 2025

SMART INDIA
HACKATHON
2025

- Problem Statement ID – **SIH25015**
- Problem Statement Title- **Intelligent Pesticide Sprinkling System Determined by the Infection Level of a Plant**
- Theme -**Agriculture, FoodTech & Rural Development**
- PS Category- **Hardware**
- Team Name (Registered on portal) : **GRP_4_SMTH**
- Team Id - **56016**

GRP_4_SMTH

CROPGRID AI: GRID-BASED INFECTION MAPPING & PRECISION SPRAYING SYSTEM

SMART INDIA
HACKATHON
2025

Combination of optical and contact Imaging will help in determining the overall health of field crops

We've developed an integrated **AI + IoT precision agriculture platform** that transforms traditional farming through intelligent automation.

Our system uses **active NDVI sensors** with controlled light transmitters and receivers to measure plant reflectance, detecting stress and pest infestations even during nighttime operations.

Real-time data flows to our cloud-based machine learning engine, which analyzes crop health patterns and pinpoints affected areas with surgical precision.

GND MODULE

PROTOTYPE

RECEIVER

EMBEDDED SYSTEM

- **GND Modules (STM8 + sensors):** Soil moisture, temp, salinity.
- **LED Arrays + Servos:** Emit RED/IR for NDVI sensing.
- **AS7263 Spectrum IC:** Captures reflectance spectrum.
- **ESP32 MCU(Field Nodes and Central Towers):** Collects data, sends via ESP-NOW.
- **Cloud ML + Sprayers:** Analyze → decide → targeted spray.
- **AC to DC Conversion:** Hi Liink + filter cap.
- **Buck Converter:** Step-down DC (e.g., 12V → 5V/3.3V).
- **STM8 MCU (Ground Modules)** collect soil and crop data.
- **An XGBoost model** analyzes this data to predict infection risk levels.
- Based on the risk, the system recommends targeted pesticides (Neem → Sulfur Dust → Copper/Mancozeb) and displays results on a web platform.

https://drive.google.com/file/d/1xtdblWiC2YkrIsvF1Qsj_CaSLZIrFUVVB/view?usp=drivesdk

ECONOMIC

- **Affordable with Support:** ₹30-40k viable via KCC loans (7% interest) + SMAM 40-50% subsidy = ₹15-20k net cost
- **Strong ROI:** 30-50% pesticide savings + premium crop pricing = payback within 2-3 seasons
- **Government Funding:** Multiple sources - AIF (3%), KCC (₹3 lakh), PM-KUSUM (75% solar subsidy)

TECHNICAL

- **Proven Tech:** Active NDVI sensors 97.8% accurate, day/night operation, successful IoT integration.
- **Ready Infrastructure:** Cloud/edge computing available, ML algorithms proven, automated sprayers exist.

MARKET

- **Huge Market:** 86% farmers are small/marginal, ₹1.67 lakh crore annual fertilizer subsidy shows urgent need.
- **Multi-stakeholder Win:** Farmers save money, consumers get safer food, government reduces subsidy burden.

IMPLEMENTATION CHALLENGES AND SOLUTIONS:

- **Connectivity** → On-device processing reduces internet dependency for real-time decisions
- **Training** → Extension Partnership: Use existing Krishi Vigyan Kendras and PAU for farmer education
- **Maintenance** → Local Network: Train technicians via agricultural universities, mobile service units

FOR FARMERS

- **Cost Reduction:** Significant savings on pesticide expenses through precise, need-based application rather than blanket spraying
- **Extended Chemical Life:** Pesticides last longer due to efficient usage, reducing frequent purchasing costs
- **Higher Profit Margins:** Premium pricing for residue-free, healthier crops in quality-conscious markets
- **Long-term ROI:** Better return on investment through reduced input costs and improved crop value
- **Sustainable Farming:** Enhanced soil and water quality preservation for long-term farm productivity

FOR CONSUMERS

- **Healthier Food:** Access to crops with minimal pesticide residues, reducing health risks from chemical contamination
- **Premium Quality Produce:** Higher nutritional value and better taste in crops grown with precision agriculture
- **Food Safety Assurance:** Reduced exposure to harmful chemicals through targeted pesticide application
- **Environmental Benefits:** Contribution to cleaner ecosystems and reduced environmental pollution
- **Market Value:** Access to certified organic or low-residue produce that commands premium prices in health-conscious markets
